Dedicated to Making Life Better

We will make life better for our partners by creating optimized products that cover, protect, contain, and enclose through our innovative design and development process. A wide variety of products come off of our manufacturing line during the course of the day. Each product has the opportunity to make someone's life better. Our goal is to ensure that each product leaves our line adding value, security, protection, function, or improvement to the end consumer's life.

Our commitment to excellence extends beyond the production lines. We strive to be the stress-free link in our partners' supply chain. We want them to know and trust that their products are safe in our hands, and we'll do everything in our power to deliver the desired results.

Our philosophy of service to our partners is simple...

We will find a way to make their lives better.

HEAT SEALING (RF WELDING)

We are leaders in the heat sealing (RF Welding) industry. In addition to having the industry's most technologically advanced equipment, our process engineers have developed one-of-a-kind machinery in-house to meet the needs of our partners.

INDUSTRIAL SEWING

We have a team dedicated to quality and excellence that can handle any job that we throw at them. Our contract industrial sewing service is a cost-effective way to streamline your manufacturing process. When coupled with RF Welding techniques, there's literally nothing we cannot do!

PRODUCT DESIGN & DEVELOPMENT

156 years, over 12,000 different products, and working with hundreds of companies has provided countless hours of knowledge, ideas, creativity, and trial and error. No matter what it is, we can help you create it, manufacture it, and make it better.

We help our partners develop:

Products that meet the highest standards of quality.

New ways of manufacturing their products.

A consistent & reliable supply chain.

Products that are optimized to meet the demands of each of their consumers.

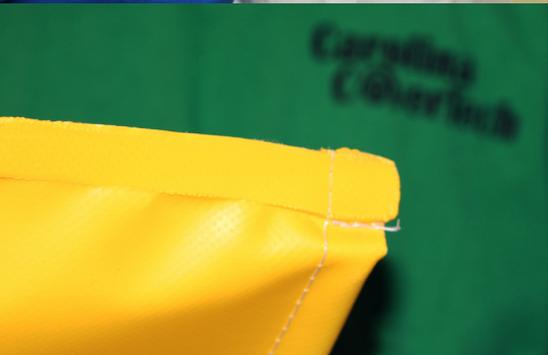

Solutions to the complex riddles related to developing and manufacturing their products.

MAKE LIFE

CLEANER

SAFER

SIMPLER

BETTER

COVER

Partners: Yamaha, Club-Car, & E-Z-Go

Primary Service: Industrial Sewing

Our covers for our golfing partners range from full enclosures to framed, fold-down club protectors. Custom cover applications range from off-road recreation, airport transportation, security, emergency medical response and many more. Our team-based design and development approach has resulted in the awarding of many patents for both our partners and Carolina CoverTech.

PROTECT

Partners: Dozens of Portable Storage Providers

Technologies: RF Welding, Industrial Sewing

We designed and developed a cover system to protect non-waterproof portable storage containers. The strength and versatility of sewing, the waterproof benefits of RF heat sealing, and the use of a variety of specialty fasteners resulted in a long-lasting, all-weather protection solution. Digital printing gives companies the ability to market themselves while protecting their customers' valuables.

CONTAIN

Partner: Codman, a Johnson & Johnson Co.
Technologies: RF Welding

Seeking a better, safer way to train medical professionals to deliver clot-busting drugs, Codman, a Johnson & Johnson Company, came to us with an idea for a liver circulation model. Using thermal heat sealing and a custom die, we produced a scale replica of the organ and its circulatory system. This disposable solution replaces the need to use animal organs. It also allows visual monitoring by trainers.

ENCLOSE

Partner: UltraTech International
Technologies: RF Welding

Spill pallets are a common form of secondary containment. These polyethylene pallets have varying capacities. A flexible polyethylene bladder system was co-developed to increase the capacity as much as 100%. When used outdoors, the spill pallets must be covered to prevent rainwater from filling the pallet. Together, we developed a variety of cover systems to eliminate this issue.

Solutions

for every stage of the product lifecycle.

We have ideas and experience to contribute to every stage of the product lifecycle. Nothing will stand in the way of us finding, creating, or perfecting the solution that is best for our partner and their consumers.

How can we make **your** life better?
